Name: Mikhale S. Dalao _____
Course / Yr. / Sec.: BSIT 4-1 _____

Student No.: 202304448 _____
Date: August 18, 2026 _____

Laboratory #1

User Management, File Operations, and Basic Command-Line Tasks in Windows

Objective:

By the end of this lab, students will be able to:

- Create and manage user accounts using the Windows Command Prompt.
- Navigate the file system using the command line.
- Perform basic file operations (create, rename, move, delete files).
- Apply basic permissions to files and directories.

Materials:

- A Windows machine with administrator access.
- Command Prompt (cmd.exe).

Policies to Apply:

1. User Access Policy: Ensure proper user account creation and management to maintain access control.
2. Data Security Policy: Ensure only authorized users have access to sensitive data through proper file permissions.
3. Backup Policy: Regularly back up critical files.

Instructions:

Step 1: User Management

a) Open Command Prompt as Administrator:

Search for cmd in the start menu, right-click, and **select Run as administrator**.

b) Create a new user use your **firstname and password should be your **lastname**.**

c) Display the list of users.

d) Switch to the New User Account created.

Step 2: File Operations

a) Navigate to home directory using the user you created.

b) Create new directory called **Lab1.**

c) Navigate into the new Directory create.

d) Create a new file name task.text

Step 1a: Open Command Prompt as Administrator

Syntax Used:

```
Search: cmd
```

```
Right-click → Run as administrator
```

Output:

Explanation:

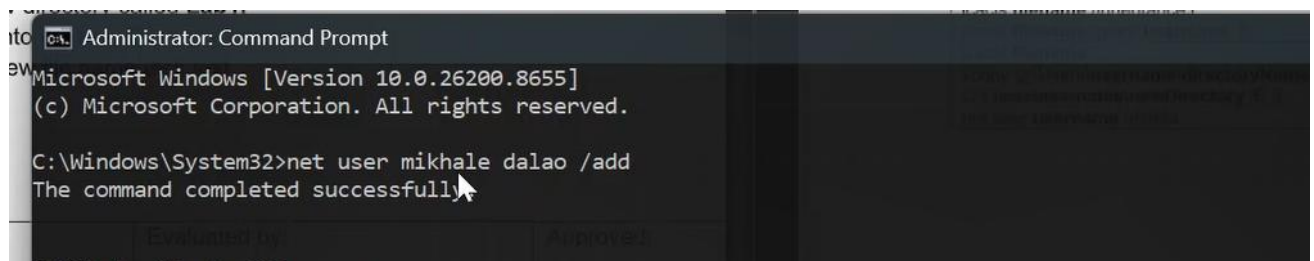

Right-clicking the result and selecting “Run as administrator” opens an elevated Command Prompt, which is required for creating and managing user accounts. The resulting window title bar later shows “Administrator: Command Prompt,” confirming elevated access was granted.

Step 1b: Create a New User Account

Syntax Used:

```
net user mikhale dalao /add
```

Output:

Prepared by: JAMES CARLO C. ASTILLA Department of Information Technology	Evaluated by: CHARLOTTE B. CARANDANG Department Chairperson Department of Information Technology	Approved: WILLIE C. BUCLATIN, PhD Dean College of Engineering and Information Technology
--	---	---

COLLEGE OF ENGINEERING AND INFORMATION TECHNOLOGY
Department of Information Technology

Explanation:

The **net user** command creates a new local user account. The first argument (**mikhale**) is the username, and the second argument (**dalao**) is the password. The **/add** switch tells Windows to create the account rather than modify an existing one.

Step 1c: Display the List of Users

Syntax Used:

```
net user
```

Output:

```
Administrator: Command Prompt

C:\Windows\System32>net user

User accounts for \\DESKTOP-G8DJ10P

-----
Administrator          DefaultAccount          Guest
Hp Elitebook 840 G6     mikhale                 WDAGUtilityAccount
The command completed successfully.

C:\Windows\System32>
```

Explanation:

Running **net user** with no arguments lists every local account on the machine. The output confirms the new account, **mikhale**, now appears alongside the existing accounts (Administrator, DefaultAccount, Guest, Hp Elitebook 840 G6, and WDAGUtilityAccount).

Step 1d: Switch to the New User Account

Syntax Used:

```
runas /user:mikhale cmd
```

Output:

```
Administrator: Command Prompt - runas /user:mikhale cmd.exe

C:\Windows\System32>net user

User accounts for \\DESKTOP-G8DJ10P

-----
Administrator          DefaultAccount          Guest
Hp Elitebook 840 G6     mikhale                 WDAGUtilityAccount
The command completed successfully.

C:\Windows\System32>runas /user:mikhale cmd.exe
Enter the password for mikhale:
Attempting to start cmd.exe as user "DESKTOP-G8DJ10P\mikhale" ...

Select cmd.exe (running as DESKTOP-G8DJ10P\mikhale)
Microsoft Windows [Version 10.0.26200.8655]
(c) Microsoft Corporation. All rights reserved.

C:\Windows\System32>
```

Explanation:

The **runas** command launches a program under a different user's credentials without logging out. Then it opens a new Command Prompt running as the **mikhale** account (after the account password was entered). The new window's title bar, "cmd.exe (running as DESKTOP-G8DJ10P\mikhale)," confirms the switch to the newly created user account.

Step 2a & 2b: Navigate to Home Directory and Create a New Directory (Lab1)

Syntax **Used:** `cd`
`C:\Users\mikhale`
`mkdir Lab1`

Output:

```
C:\> cmd.exe (running as DESKTOP-G8DJ1OP\mikhale)
Microsoft Windows [Version 10.0.26200.8655]
(c) Microsoft Corporation. All rights reserved.

C:\Windows\System32>cd C:\Users\mikhale
C:\Users\mikhale>mkdir Lab1
```

Explanation:

From the new **mikhale** cmd window, **cd C:\Users\mikhale** changes the current directory to that user's home folder. **mkdir Lab1** then creates a new subdirectory named **Lab1** inside it. No output is returned on success, the absence of an error message confirms both actions completed.

Step 2c: Navigate into the New Directory

Syntax Used:

```
cd Lab1
```

Output:

```
C:\> cmd.exe (running as DESKTOP-G8DJ1OP\mikhale)
C:\Windows\System32>cd C:\Users\mikhale
C:\Users\mikhale>mkdir Lab1
C:\Users\mikhale>cd Lab1
C:\Users\mikhale\Lab1>echo
```

Explanation:

The **cd Lab1** command changes the working directory into the folder just created. The prompt updates to **C:\Users\mikhale\Lab1>**, confirming the current location is now inside the Lab1 directory.

Step 2d: Create a New File Named task.text

Syntax Used:

```
echo message > task.text  
type task.text
```

Output:

```
Select cmd.exe (running as DESKTOP-G8DJ1OP\mikhale)  
  
C:\Users\mikhale>cd Lab1  
  
C:\Users\mikhale\Lab1>echo message > task.text  
  
C:\Users\mikhale\Lab1>type task  
The system cannot find the file specified.  
  
C:\Users\mikhale\Lab1>type task.text  
message  
  
C:\Users\mikhale\Lab1>
```

Explanation:

The **echo message > task.text** command writes the text “message” into a new file called **task.text**. Running **type task.text** with the full filename then displays the file's contents.
